Soninke typing with the N'ti script

Unshifted

There are 8 diacritics in the N'ti script. 7 of these diacritics are used on vowels. 6 of the vowel diacritics are shown on the *Unshifted* image above.

Type a vowel and then the key that has the diacritic you want to add to the vowel you just typed. For example, if you want to type ɔ̆, then type ɔ (which is on the 'a' key) and then type the ˘ diacritic (which is on the 'f' key). So, 'af' = ɔ̆
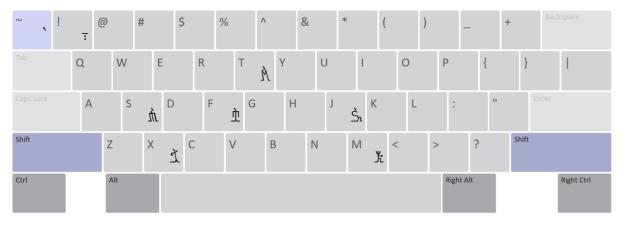

If you type the key that has the diacritic again, you will be left with the normal vowel without the diacritic. Using the ɔ̆ example above: if you type 'f' *again* you will be left with ɔ. So, 'af' = ɔ̆, and 'aff' = ɔ.

Type a vowel twice to add the Yin Duro Futiye diacritic (ˆ) on top of it. For example, if you want to type ɔ̂, then type the 'a' key twice: 'aa'.

If you want to type just any of the diacritics by themselves, press the ` key. All of the diacritics are on the ` key. The number of times you press the ` key will determine which diacritic is produced. The order is as follows:
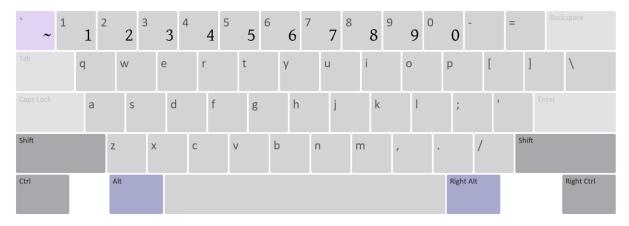

1 time = ¯	2 times = ·	3 times = ~	4 times = ˆ	5 times = ˧	6 times = ˎ	7 times = ˘	8 times = `
` = ¯	`` = ·	``` = ~	```` = ˆ	````` = ˧	`````` = ˎ	``````` = ˘	```````` = `

Shifted

Type Shift and the letter you want to add the Yilla diacritic (`). For example, ṁ is created by typing Shift and the 's' key at the same time. See the *Shifted* image above. The NM letter (ꞥ) is also Shift + m.

Alt

Press the Alt key (either the left or the right Alt key) and a number key to produce a Hindu-Arabic digit (0123456789).

Alt + Shifted

Press the Alt key (either the left or the right Alt key), the Shift key, and the exclamation mark key (all at the same time) to produce a Latin exclamation mark (!).

Press the Alt key (either the left or the right Alt key), the Shift key, and the semicolon key (all at the same time) to produce a Latin exclamation mark (;).

Press the Alt key (either the left or the right Alt key), the Shift key, and the comma key (all at the same time) to produce a Latin comma (,).
